LANGUAGES

- Bosnian (Native)
- English (Level C1)
- German (Basic)

SKILLS

- **Programming & Frameworks:** Python (Advanced), Streamlit, TypeScript, React, Vite, Tailwind CSS, C#, JavaScript/jQuery, Basic programming
- **AI & Automation:** LLM integration (Gemini API, Ollama), AI coding agents (Claude Code, Aider), AI agent automation, Multi-agent systems (AutoGen), Google Cloud API, Google Apps Script, PowerPoint VBA automation
- **DevOps & Cloud:** Docker, Linux (Ubuntu/Debian), CI/CD pipelines, Git / GitHub, GitHub Pages, Cloudflare, Web Hosting administration, Mac OS
- **Virtualization & Infrastructure:** VMware, Hyper-V, VirtualBox (Multi-OS environments)
- **System Admin:** Active Directory, G Suite Admin, OS Administration, Network & Security equipment configuration, Hardware & Software maintenance, Network Monitoring
- **Specialized Tools:** MS Office, Google Suite, Photoshop, Joomla (K2), 3D modeling (Rodin-3D, ComfyUI, .glb), QA Manual course

KEY PROJECTS

- **Interactive Digital CV with Offline Chatbot** – Built a multilingual web CV in two versions (Python/Streamlit and a static HTML/JavaScript version on GitHub Pages) with a custom offline chatbot for question recognition, a secure contact form (Google Apps Script, Cloudflare Turnstile, auto-reply) and automated PDF CV generation – using the AI agent Claude Code during development.
- **Help Desk Ticketing System with AI Integration** – Designed and implemented a custom Linux-based help desk ticketing system and integrated an AI feature (Gemini API) that automatically drafts responses to user requests.
- **Local AI Development Lab** – Set up and optimized a high-performance local development environment (Ubuntu VMs, Docker, Ollama) for running and testing large language models (LLMs) without relying on cloud services.
- **Client Web Development** – Designed and built modern web interfaces for companies such as INTESECO using React and Tailwind CSS.
- **AI Image-to-3D Model Generation** – Explored and used various generative AI tools (ComfyUI, Rodin-3D, DINOv3) to turn images into 3D models using the power of local hardware, and integrated the resulting models into web applications as .glb files.
